

THE INFORMATICS OF RADIO 1190

INFO 2131 - Nicole Keffer, Bianca
Cano, Lauren Ward, Ella Krelovich

ABOUT RADIO 1190

Radio 1190 is a student run, volunteer radio station at CU Boulder. We choose to study the information flow throughout the organization because the station faces a lot of unique challenges as it recovers from the pandemic and reevaluates and recreates it's processes to fit the station's current needs.

WHO WE INTERVIEWED

Position	General Manager	Chief Engineer	Student Volunteer Manager	Co-Music Director
Relationship	Manages student managers and works with the chief engineer	Approves timesheets for student managers and works with the general manager	Manages student volunteers and works under the general manager	Manages automation system and works under the general manager and chief engineer

A professional recording studio setup on a wooden desk. A boom microphone is suspended over a laptop and a tablet. A calculator and various cables are also visible on the desk.

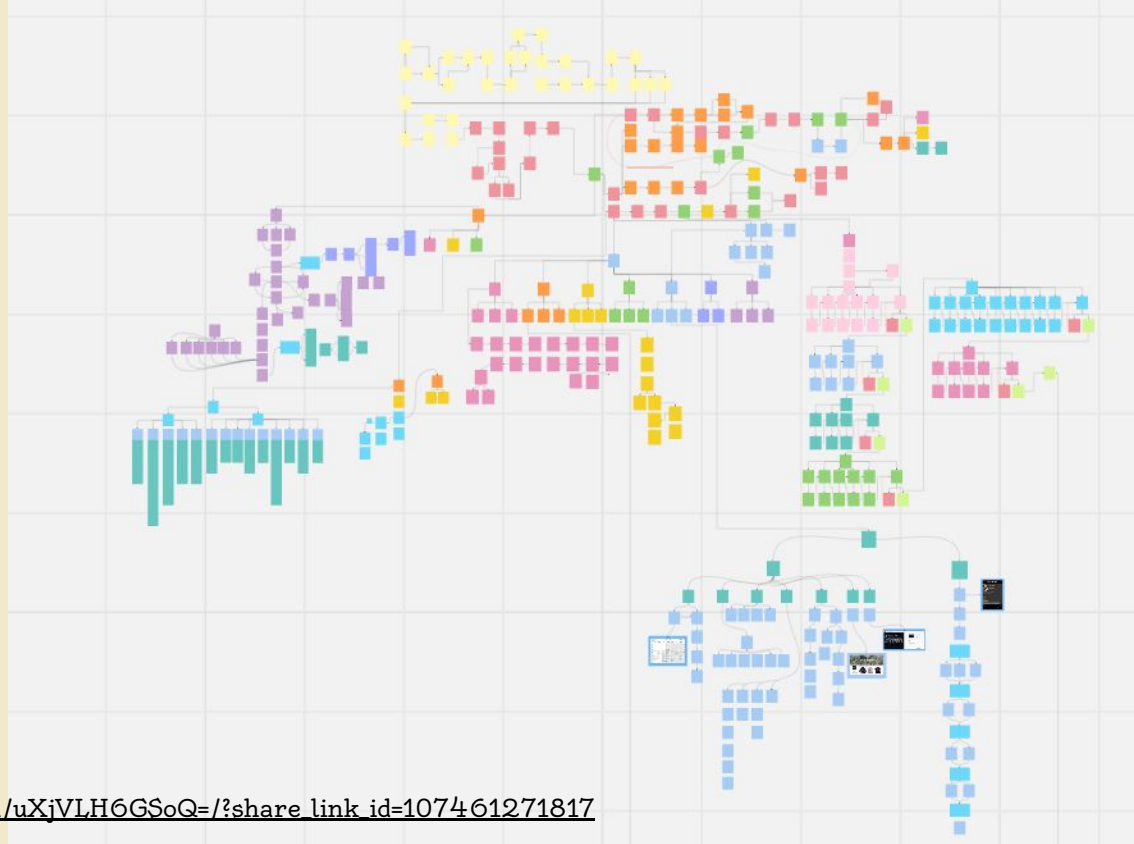

We looked at the communication tools and process. Outside of emails, the station's Discord server is the main method of communication. There are different dedicated channels for information and chatting, ranging from team specific to weekly album postings and fun, commemorative pictures.

OUR DATA JOURNEY

https://miro.com/app/board/uXjVLH6GSoQ=?share_link_id=107461271817

3 CHALLENGES

1. The station wants to start selling underwriting again. However, the processes need to be revamped to make it more successful for the station. (Paying students on commission, training new DJs, etc.) It requires a whole new process to be built from scratch.
2. The station's automation system failed, so they have to figure out how to set up the new system and train current DJs. There are a multitude of factors involved in this. Setting up the new system also means that it will be easier to run underwriting spots during student shows. However, this means that about 70 DJs have to be trained on the new system and how it works, which is logistically hard to complete.
3. Running funding drives now that CU processes have changed. The station used to have 20 students taking credit card information which is no longer sustainable or trusted by a general population of donors. However, CU's online donation system only allows organizations to see who donated quarterly, making it hard for the station to give donation gifts to donors.

3 DESIGN PRINCIPLES

1. The DJ training canvas course is an efficient way to train new DJs as it is accessible and easy to understand to anyone who wants to volunteer with the radio station. Canvas is an application that students know how to use and navigate so it is less of a turn off for students looking to become a part of an organization.
2. The radio website is easy to navigate and provides information in multiple places, making it easy to find information. A quality website always stands out and makes an organization look more official. We appreciate that it allows students to showcase their work as part of the station, as well as being a quick way to listen to the station and encourage visitors to donate. It has a unique brand identity that sets it apart from other student organizations and makes it more appealing to students.
3. The radio Discord server allows easy communication between different parties involved with the radio station, as it has different channels for different groups to communicate with each other. Discord is a highly effective form of communication since it allows for topic management and has little to no learning curve. Students are usually Discord literate and it makes it easier for them to integrate into the organization.

3 RECOMMENDATIONS

1. The station should lay out of all the processes of adding something new to the station before it begins the process, to make less overwhelming as they go through the process.
2. Put a technical log system (in discord to streamline) in place so the chief engineer can organize issues by importance and it is easier for volunteers to report issues to management.
3. To get volunteers more involved in the station, plan events that reach out to the broader CU community to spread the word about the station.
